

Auto OCR Integration for Laserfiche

Cities Digital's Auto OCR offers the ability to scan a Laserfiche® Repository as a scheduled task and automatically index and OCR newly added documents. This scheduled task is configured by the administrator, and runs daily with no user interaction. Once Auto OCR is set up, users can allow it to run knowing their new documents will be indexed and OCR'ed behind the scenes.

Auto OCR by Cities Digital allows for the following features automatically:

- Allows for automatic indexing and OCR'ing of new documents as part of a Windows scheduled task.
- Enables users to choose server to execute OCR engine processing.
- Saves time by running indexing and OCR'ing daily behind the scenes.
- No user interaction needed after initial configuration.

Auto OCR saves time by allowing the administrator to configure the Windows task to run daily, and let their newly added documents be indexed and OCR'ed at the end of the day.

Using Auto OCR requires a one-time configuration to set up. The Auto OCR also requires a Laserfiche® user license.

Contact sales@citiesdigital or call 855-714-2800 x 2 for more information about Cities Digital's Auto OCR Integration for Laserfiche®.
